

Reward your ERP with enriched Midas master data

Overview and Benefits

Infoplus Midas software governs your master data and provides valuable insights into your supply chain and operations. Midas creates accurate, high-quality data at source, ensuring that master data entering your ERP is compliant with defined corporate data standards.

Midas is employed for both legacy data projects as well as in Business as Usual governance mode, to create foundational data for syndicating to your ERP, enabling improved ERP performance.

Journey with Infoplus MDM from the “as-is” of uncontrolled free-text data entry, incomplete and inconsistent records, duplicate proliferation, lack of standards and inadequate governance towards the “to-be” of structured, standardised and enriched golden data.

Technologies

Midas software is delivered as a fully-hosted Software as a Service technology. The Midas architecture is designed around a multi-tenant database environment and load-balanced multi-threaded application servers.

Midas web-application is designed using **MVC architecture and runs on .NET software framework**. The SQL Server relational database management system manages back-end data processing, storage and data security for the Midas application.

Integrations

Midas integrates to all leading ERPs such as **SAP, Oracle and Maximo**. Our preferred method of integration is web-services, ensuring swift and easy connections to your ERP.

We have additionally implemented Midas as an on-premises LAN solution, and we can accommodate this requirement if this is your preferred solution.

Alternatively, Midas can be employed as a stand-alone application, providing simple, configurable exports for batch upload.

Clients

Midas provides high quality data for customers in multiple asset-intensive industries such as **Oil & Gas, Energy, Mining, Construction, Manufacturing and Consumer Products**.

Our clients include large, multi-site global organisations with recognisable household names, significant niche industry players, leading systems integrators and consultancies.

Midas Modules

Midas contains the following key modules to manage your master data:

Data-Cleaning and Governance

The module contains dictionary templates for all MRO and indirect materials, services templates, configurable workflows, duplicate identification and compliance indicators that underpin bulk legacy data-cleaning projects and ongoing governance processes, seamlessly creating foundational data according to your ERP requirements

Vendor Portal

Cleanse and manage existing and new vendors according to defined standards, fields and processes in the configurable Midas vendor portal

Assets

Midas manages ISO 14224 Asset Registries, Plant Maintenance, Asset Classifications, SPIRs and Bills of Material, for syndication of compliant structured data to your ERP

Admin

Manage user access and Single Sign On, user privileges and roles, structure and configure tickets and workflows processes

Benefits of superior quality Midas master data are improved inventory visibility, reduced stock levels and downtime, increased maintenance “wrench time”, and better informed procurement decisions.

Midas improves the value of your foundational materials data and delivers elegant integrated governance solutions
